TRINITI

Castle Fruits

TRINITI adds a new client in FOOD sector with the implementation of open source ERP application

Leveraging its expertise in open source applications, Triniti is assisting **Castle Fruits**, a leading U.S. based food and fresh produce exports and shippers, with the implementation of iDempiere ERP.

Various business processes have been streamlined with this implementation, including Procurement, Finance, Inventory, and Sales & Distribution, enhancing their overall export and shipping process. Below are a few solution highlights -

Sales & Distribution

- Complete visibility into product lifecycle – **from receiving the order to packaging, shipping, up until delivery**
- Optimizing the containers/ orders based on container weight and volume
- Automation of sales order creation based on vendor PO's

Finance

- Enabling the multi-organization features for booking of transaction across organizations
- Enabling the freight forwarder invoicing based on order booking
- Effective reconciliation process

Procurement

- Automation of vendor price lists on a weekly basis
- Visibility of last average price by vendor and product
- The new system could now maintain vendor wise & product wise data for automation

Inventory

- Enhanced visibility into the inventory, leading to proper procurement and cost savings
- Enabling the batch control and self expiry process
