Triniti – A Leader in Enterprise Solution Space

Triniti has been implementing enterprise applications across industries over two decades. Leveraging its rich business experience combined with technical expertise, Triniti rolls out processes in the areas of Financials Accounting & Reporting, Procurement, Inventory, Sales & Distribution, Manufacturing Execution, Customer Relationship, Human Capital, and Supply Chain Planning using Oracle ERP applications. For small and medium organizations, Triniti uses open source technologies and applications to streamline their business processes and bring them onto a unified system.

With more than 2 decades of enterprise consulting experience, Triniti has been a preferred partner for its customers that understand their needs and goals to help them achieve simple yet best solutions

iDempiere by Triniti

After a thorough evaluation of open source ERP software, Triniti has chosen iDempiere to be best suited for micro, small and medium enterprises. iDempiere is a web-based application with PostgreSQL as backend database. Its user interface screens and business logic layer are developed using open source java technology and are easily customizable as per business requirements. There are no vendor lock-ins, no license cost, and multiple support options are available through vibrant communities. Triniti has implemented iDempiere across industry verticals such as Manufacturing, Pharmaceuticals, Training, and Retail, to name a few. Any gaps—be it in reporting or business process mapping—are addressed by Triniti's bolt-on tools or enhancements. Leveraging eWorksheets, Triniti's in-house-developed business reporting tool, all custom reports and third-party documents such as purchase orders and invoices can be sent/printed out of iDempiere.

Our Differentiators - Why Choose Triniti for ERP Implementation

Implementing ERP demands knowledge on industry standard business processes across verticals, compliance and statutory reporting requirements along with thorough underlying technology. Any gaps in mapping the business requirements in the system could lead to great losses in terms of resources and time. Some of our service & solution differentiators are –

We help you implement iDempiere ERP by bringing all your core processes onto a single system	Leveraging our decade long consulting experience, Triniti will advise you on standard processes and controls	Gap analysis—be it in reporting or business process mapping— is addressed by our bolt-on tools or in-house enhancements	Using Triniti's reporting tool eWorksheets, all custom reports & documents such as PO & invoices can be printed out of iDempiere	We bring vast knowledge across industries such as Pharmaceuticals, Manufacturing, EPC, Information Technology, Retail and so on

TRINITI

How iDempiere Stands Against Other Accounting Packages

Feature	iDempiere	Other Accounting Packages
Access Controls	Complex role-based access control can be implemented. Administrator & technical staff's access to sensitive data can be restricted	User-based access controls. Administrator & technical staff access cannot be restricted
Data Integrity — Deletion of Transactions	Transactions can only be reversed & not deleted; therefore maintaining the transaction trail & history	Without leaving a trace, transactions can be deleted from the application
Module/ Business Process Coverage	All processes including Finance, Procurement, Inventory, Costing, Supply Chain, Manufacturing, CRM and Human Capital management can be mapped on iDempiere—making it a unified platform for all the enterprise functions	Without leaving a trace, transactions can be deleted from the application
Restrictions based on Period or Financial Year	The system facilitates implementing restrictions based on past period so that no back-dated transactions can be entered by users	Restrictions based on past period are very basic in nature and past-dated transactions can be entered easily
Support Eco-system	Apart from dedicated partners, supported by a strong community of open source evangelists	Supported mostly by hardware vendors who became partners with limited functional and technical expertise
Cost of Ownership	No license fee. All upgrade patches can be downloaded without any fee	Upfront license fee along with annual maintenance support fee
Customization	Easy customizations/ enhancements due to open source	Customization/ enhancement are possible by selected partners
Integration with TPAs	Provides standard APIs to integrate with any third-party tools	Flat-file based manual integration can be built using proprietary code
Operating Environment	Can be installed on Linux and Windows-based environments	Supports only Windows-based servers and workstations
Flexibility in Deployment	Can be deployed on premise or cloud	Can't deploy on cloud of choice. Cloud access through vendor only

iDempiere – Application Advantages

✓ Flexible and scalable fully functional ERP, which grows as per the organization's need

✓ No license fee, unlike commercial ERPs. Cost is for only implementation and hence lower TCO

✓ With its internal application dictionary, end user can use it to customize menu, window and tab. 80% of the customization work can be done without coding

✓ Since iDempiere is open source and uses mainstream J2EE technology, it can be easily customized by your IT team. No vendor dependency and lock in for upgrades and new module addition
